

What I Could Have Done Better

Add acceptance criteria to user stories

The screenshot shows a Jira issue page for 'IMS-8'. The issue title is 'As a user I can create items, delete items, update items, view a specific item, or view all items in the system.' Below the title are buttons for 'Attach', 'Add a child issue', 'Link issue', and a dropdown menu. The 'Description' field contains the text 'Add a description...'. The 'Acceptance Criteria' section is highlighted with a red circle and contains the text: 'Given I'm a user that has the application up and running, when I enter a specific command to either create, delete, update, or view an item, then the changes made to the item/items will be reflected in the database.' Below the acceptance criteria is a 'Child issues' section with a progress bar showing '100% Done'. The child issues are listed in a table:

Child issues	Progress
IMS-25 Create ItemDAO Class	2 ST DONE
IMS-26 Create ItemController class	2 ST DONE
IMS-39 Test ItemDAO class	3 ST DONE
IMS-40 Test ItemController Class	3 ST DONE

On the right side of the page, there is a 'To Do' dropdown menu and a list of fields: 'MoSCoW' (Must Have), 'Definition-of-Ready' (Item is given estimation 0...), 'Definition-of-Done' (None), 'Assignee' (Unassigned), 'Sprint' (IMS Sprint 3), 'Story point estimate' (10), and 'Reporter' (ST Sam Tarullo).
