

# What I Could Have Done Better

Break down user stories to be more specific

Projects / IMS / Orders / IMS-9

**As a user I can create orders, add items to orders, remove items from orders, view orders, view a specific order, delete an order, and calculate the cost of an order from the system.**

IMS-28	Create OrderDAO Class	2	ST	TO DO
IMS-29	Create OrderController Class	2	ST	TO DO
IMS-56	Test OrderDAO Class	3	ST	TO DO
IMS-57	Test OrderController Class	3	ST	TO DO

I could instead say...

- As a user I can create an order to be added to the database so I can add items to it.
- As a user I can select a specific item so it can be added to an order.
- As a user I can remove a specific item from an order that I don't want included in the order while still keeping the other items within the order.
- As a user I can delete a specific order from the database without manually removing every specific item.
- As a user I can view the total cost of an order so I can view the total amount of all my specific items added together.
