

# Additional Issue #2

Before

```
74
75 public void doAction(CrudController<?> crudController, Action action) {
76     switch (action) {
77         case CREATE:
78             crudController.create();
79             break;
80         case READ:
81             crudController.readAll();
82             break;
83         case UPDATE:
84             crudController.update();
85             break;
86         case DELETE:
87             crudController.delete();
88             break;
89         case RETURN:
90             break;
91         default:
92             break;
93     }
94 }
95
96 }
```

After

```
98
99 public void doAction(CrudController<?> crudController, Action action) {
100     switch (action) {
101         case CREATE:
102             crudController.create();
103             break;
104         case READ:
105             crudController.readAll();
106             break;
107         case UPDATE:
108             crudController.update();
109             break;
110         case DELETE:
111             crudController.delete();
112             break;
113         case RETURN:
114             break;
115         default:
116             break;
117     }
118 }
119
120
121 public void doAction(OrderController oc, OrderAction oi) {
122     switch (oi) {
123         case CREATE:
124             oc.create();
125             break;
126         case ADD:
127             oc.addToOrder();
128             break;
129         case TOTAL:
130             oc.getTotal();
131             break;
132         case READ:
133             oc.readAll();
134             break;
135         case ITEMS:
136             oc.readItems();
137             break;
138         case UPDATE:
139             oc.update();
140             break;
141         case REMOVE:
142             oc.deleteItem();
143             break;
144         case DELETE:
145             oc.delete();
146             break;
147         case RETURN:
148             break;
149         default:
150             break;
151     }
152 }
```
